Companies & Production

Founding companies, two-stage production, factory levels, and hiring.

 Updated 2026-09-23

Two-stage production

Nothing in Parliamentum is spawned by the game — it is all made by players in a two-stage chain:

1. **RAW companies** extract raw resources (grain, iron, oil) from a region. They produce more when founded in a region whose resource matches, thanks to the region bonus.
2. **MANUFACTURING companies (factories)** consume raws to make finished goods:
 - **Food** from grain
 - **Weapons** from iron
 - **Tickets** from oil

Since Update 3, factories can be founded anywhere; only the region **bonus** is tied to the local resource.

 Game

(rebalanced 2026-09-01; the launch-week 20–170 gold ladder is retired).

- Upgrading either type to level n costs $15n$ gold and spends the company's accumulated production EXP. Every level above 1 adds +1% output for a raw company and +2% for a factory (on top of the tier yield), and one more worker slot.

The raw needed per manufactured unit rises with tier (e.g. **10** raw per T1 unit up to **100** per T5 unit; tickets are steeper, needing oil per unit).

Working your company

You must **hire** workers (you can employ yourself). A shift's output depends on the worker's stats and the company's tier and level — see [Energy & Work](#). Workers are paid a **wage** in the state's currency, or in **share mode** take a cut of the goods produced instead of cash.

A company can employ up to its level in workers, capped at **50**.

Workforce ledger (12 September 2026). Every shift is recorded. On your company page each worker shows their **last 7 days**: shifts, energy spent, units produced, pay received (or units kept in share mode) and the time of their last shift. A worker with no shift in 7 days is marked **idle** and can be dismissed right there. On the Work card you see your own weekly line. The ledger began on release day, so a full week builds up from there.

Moving a company (12 September 2026). From the company settings you can move a company to **the region you are a citizen of** for a flat **100 gold**. You must be standing in that region; level, stock, EXP and workers travel with it, and the region's resource bonus becomes the new home's. Workers are told and must be in the new region to work. There is no separate cooldown — the 7-day citizenship cooldown is the brake.

Closing a company (7 September 2026)

Closing refunds **half the founding cost plus half of every upgrade** you paid (a level-1 company founded for 100 gold returns 50 gold); produced stock and raw stock return to your inventory up to your storage capacity. Your workers lose the job and are told. You receive a **receipt notification** with the refunded gold, so any later question can be checked against it.
