Stats — Strength, Education & Economy

What each stat is for, exactly where it pays off, and how training raises it.

 Updated 2026-09-15

Why stats exist

Levels open doors; **stats decide how hard you hit, how fast you learn, and how much you produce.** There are three, they never decay, and every point keeps working for you forever.

Strength — the soldier's stat

Strength is raw combat power. Every point adds **+1 to the damage base of every weapon you fire:**

$$\text{damage} = \text{weapons} \cdot (5 + S_{\text{str}}) \cdot m_{\text{tier}}$$

A strike with 100 weapons at 0 Strength deals 500 damage with T1 weapons — the same strike at 20 Strength deals 2,500. Strength also stretches your logistics: each point adds **+3% storage capacity.**

Raise it if: you want to matter on the front line. Damage is how regions are won — see [War & the Front](#).

Education — the scholar's stat

 Game

cap, so it compounds on every stat you ever train, including Education itself.

- **+1.5% production per point** in every work shift.

Raise it if: you think long-term. Education makes every other stat cheaper to build.

Economy — the producer's stat

Economy is the biggest single lever on your output and income:

- **+2% production per point** in every work shift — a third more than an Education point in the shift formula.
- **Higher wages** — job listings pay $\text{base} + \text{Economy} \times \text{multiplier}$, so skilled workers literally earn more from the same job.
- **+2% storage capacity** per point.

Raise it if: you work for a living — factory hands, company owners, and traders all live off this stat.

How training works

Training runs on the dashboard, **one stat at a time**, and each session raises the stat by one:

- **Cost:** level n costs n gold.
- **Time:** $\text{round}\left(10 \cdot n \cdot 1.1^{n-1} / (1 + 0.01 S_{\text{edu}})\right)$ seconds.

Early points are near-instant; later ones are real commitments — which is why the Education discount matters. Full numbers live in the [Formula Reference](#).
