BOOK ECONOMY

COMPANIES & PRODUCTION

Founding companies, the production chain, company levels and EXP, hiring, wages and shares, and the jobs board.

UPDATED 2026-10-09

THE PRODUCTION CHAIN

Players make almost every good in Parlamentum. The only exceptions are energy drinks, which you buy with gold, and the few T1 goods every new citizen starts with. Everything else comes out of a player's company:

1. **Resource Plants** extract the seven raw materials (grain, cotton, timber, iron, coal, copper, oil) from a region.
2. **Factories** turn one raw into finished goods:
   - **Food** from grain
   - **Weapons** from iron
   - **Tickets** from oil
3. **Light Industry** turns two raws into a component, and a **Shipyard** builds ships from the three components.

The deposit bonus. Many regions sit on a deposit of one raw, with a deposit bonus. A Resource Plant gets that bonus on top of its output when the region's deposit is the raw it extracts — the founding form shows the bonus before you pay. Factories, Light Industry and Shipyards never get a deposit bonus: they produce the same wherever they stand, so the region's resource does not matter to them.

FOUR INDUSTRY CLASSES

Every company belongs to one of four classes:

CLASS	MAKES	FOUNDING	WHERE
Resource Plant	the seven raws	100 gold	anywhere in your country
Factory	food, weapons, tickets (T1–T5)	100 gold	anywhere in your country
Light Industry	construction materials, fuel, electronics	250 gold	anywhere in your country
Heavy Industry (Shipyard)	ships (T1–T5)	500 gold	**coastal regions only**

A Shipyard stands on a sea or Caspian coast and can only move to another coastal region; the map's region panel marks every coastal region.

Raw per unit. A factory's raw bill per unit rises with its tier, and tickets are the steepest:

TIER	FOOD (GRAIN)	WEAPONS (IRON)	TICKETS (OIL)
T1	10	10	25
T2	20	20	50
T3	35	35	90
T4	60	60	150
T5	100	100	250

A factory keeps its raw in the company store: you deposit it from your inventory and can take it back with **Withdraw** at any time (only what fits in your storage comes back). When the store runs dry mid-shift, the shift stops there and the unspent energy stays with the worker; the worker and the owner are each told once a day.

Components. Light Industry turns two raws into one component. Components have no tier; your storage holds **150** of each to start, and like every shelf it grows with your level, Strength and Economy skill (see Leveling & Training).

COMPONENT	PER UNIT
Construction materials	5 iron + 5 timber
Fuel	5 coal + 5 oil

COMPONENT	PER UNIT
Electronics	5 copper + 5 cotton

Ships. A Shipyard builds ships from the three components. Each ship is worth **four weapons** of its tier — in damage and in raw. It levels and yields like a factory, and higher tiers hit harder (the same ×1.0–×3.0 as weapons). Storage holds **30 / 18 / 10 / 6 / 3** ships by tier, before your level, strength and skill bonuses.

TIER	CONSTRUCTION MATERIALS	FUEL	ELECTRONICS
T1	2	1	1
T2	4	2	2
T3	6	4	4
T4	12	6	6
T5	20	10	10

Plants with several inputs. Light Industry and Shipyards keep a separate store for each input: you deposit and withdraw each one on its own from the company page, and the inputs panel shows what every line covers. A shift stops at the **scarcest input** — 50 iron and 15 timber make only 3 construction materials.

FOUNDING A COMPANY

- You need **level 15**.
- You must be **standing in the region**, not in flight; the region must be open for play and belong to the country you are a citizen of.
- Founding costs **100 gold** for a Resource Plant or a Factory, **250 gold** for Light Industry and **500 gold** for a Shipyard — the same at every tier.
- Factories and Shipyards are founded at a tier, **T1–T5**, which never changes. Resource Plants and Light Industry have no tier.
- A name (up to 30 characters), a description (up to 500) and a logo are optional; the logo shows on the jobs board and on the company's page.

LEVELS AND EXP

Every unit a company produces earns it **1 EXP**, counted on the whole output before production tax and worker shares.

- Upgrading to level n costs $15n$ gold and **spends** the EXP that level needs. There is no level cap.
- Every level above 1 adds **+1%** output to a Resource Plant and **+2%** to every other class (on top of the tier yield), plus **one more worker slot**, up to **50**.
- A **Resource Plant** also burns $50n$ **units of its own output** from the company warehouse to reach level n — a sink that grows with the economy. When the warehouse holds less, the owner's own inventory covers the rest. Factories, Light Industry and Shipyards burn nothing.

The EXP a level needs grows with every level:

LEVEL	RESOURCE PLANT	T1 FACTORY OR LIGHT INDUSTRY
2	200	275
5	1,600	2,200
10	5,400	7,425
50	68,600	94,325

A higher-tier Factory or Shipyard needs less, in step with its tier yield: a T5 line needs **40%** of the T1 figure, because it makes 40% as many units. The company page always shows the EXP you have and the EXP the next level needs.

HIRING AND PAY

Turn on **Hiring open** and choose how you pay. Your listing then appears on the jobs board for every player who is a citizen of your country or holds a work permit for it.

- **Money wage** — a **base wage per 10 energy**, in the currency of the country where the company stands, plus an optional bonus that grows with the worker's Economy skill (you set its multiplier, 0 to 50). A worker is paid for the energy they actually spend — a half bar earns half — and the state's **income tax** is withheld from it. The money comes out of **your wallet** in that currency: if it cannot cover a shift, the shift does not start and you get a notice with the shift's cost and your balance. A company in an independent region pays in USD, untaxed.
- **Production share** — the worker takes **10% to 100%** of each shift's output in kind instead of money. The share is worked out on the whole output but never takes more than what is left after the production

tax. It lands straight in the worker's storage: when it would not fit, the shift is shortened until it does, and with no room at all the shift is refused before any energy is spent.

A worker keeps the terms that were on offer when they enlisted — editing your listing changes nothing for workers already hired. The skill bonus of a money wage always uses the worker's current Economy skill. To pay one money-wage worker differently, use the **Wage** button next to them in the Workforce panel; the new wage applies from their next shift.

A company employs up to its level in workers, capped at **50**. You can work in your own company with **Work here** even while hiring is closed: you earn no wage, but you take one of the slots. You cannot dismiss yourself — resign instead.

Workforce ledger. Every shift is recorded. On your company page each worker shows their **last 7 days**: shifts, energy spent, units produced, pay received (or units kept in share mode) and the time of their last shift. A worker with no shift in 7 days is marked **Idle** and can be dismissed right there. On the Work card you see your own weekly line.

WHAT A SHIFT PRODUCES

A shift's output depends on the worker and on where the company stands — the exact calculation is on Energy & Work. In plain terms:

- **The worker** — Economy skill, Education and level all raise it.
- **The company** — its class, its tier yield and its level.
- **The deposit bonus** — Resource Plants only, as described above.
- **The region** — its Industry index raises output, scaled by the region's electricity and larger in one of the three top-ranked cities; Socialism adds a flat +15% across the state.
- **The worker's convoy** — a Mobile Workshop adds up to +10%; see The Convoy System.
- **Crowding** — once more than half of a region's shared capacity is used up, its companies produce less, never below half; a thinly worked region gives pioneers up to +10% instead (see Infrastructure & Region Capacity).
- **A fallen capital** — a country whose capital fell in war produces 10% less for 30 days.

On a Resource Plant the state's **production tax** takes its share of every shift's output in kind (10% unless the state changes it); see Markets, Tax & FX.

THE JOBS BOARD

The **Jobs** page lists every company that is hiring in a country where you are a citizen or hold an approved work permit (you can hold up to two permits).

- **Order.** Money jobs whose employer can cover your full shift come first, the highest wage for you on top; then production shares, the highest share first; last come the money jobs whose employer cannot pay a full shift right now, however high the offer.
- **What a row shows.** A money job shows the wage for a full shift of your energy bar at your Economy skill, before tax, and roughly what you would net right now. Listings with a base wage under 1 unit of currency per 10 energy are marked **pays almost nothing**; employers whose wallet cannot cover your full shift are marked too.
- **Filters.** Search by company, product, region or owner; show only the region you stand in; **Hide listings that cannot pay**; **Hide full**.
- **Enlisting.** You hold **one job at a time** — resign first to change. To enlist you must be standing in the company's region, not in flight, and the company needs a free slot.
- **Working.** Every shift checks again that you stand in the company's region and still have the right to work there. If a country revokes your permit you keep the job, but you cannot work shifts until you get a new permit or citizenship.
- **Leaving. Resign** on the Jobs page at any time. A job also ends when the owner dismisses you, when the company closes, or when your account falls inactive after 15 days away.

MOVING A COMPANY

From the company settings you can move a company to **the region you are a citizen of** for a flat **100 gold**. You must be standing in that region, not in flight; level, stock, EXP and workers travel with it, and the region's deposit bonus becomes the new home's. A Shipyard can only move to a coastal region. Workers are told and must be in the new region to work. There is no separate cooldown — the 7-day citizenship cooldown is the brake.

CLOSING A COMPANY

Closing refunds **half the founding cost plus half of every upgrade** you paid (a level-1 company founded for 100 gold returns 50 gold). Produced stock, raw stock and every input return to your inventory up to your storage capacity; anything beyond it is lost. Your workers lose the job and are told. You receive a **receipt notification** with the refunded gold, so any later question can be checked against it.
