BOOK PROGRESSION

LEVELING & TRAINING

The XP curve, where XP comes from, what each level unlocks, and how training scales with time and gold.

UPDATED 2026-10-09

EXPERIENCE AND LEVELS

Every level has an XP threshold given by:

$$\text{xpForLevel}(n) = \lfloor 5.32 \cdot (n-1)^{2.6986} \rfloor \qquad \text{xpForLevel}(1) = 0$$

One smooth curve: the first levels come within minutes, and every next level costs a little more than the one before, with no point where the step suddenly jumps. The most active players reach about level 200 in a year.

Your total XP never stops growing, and you are always the highest level whose threshold you have crossed. **The XP bar counts within your current level**: it shows how far you are from this level to the next, and on a level up it resets, carrying any overflow into the new level.

A few thresholds: level 2 needs **5** total XP, level 5 needs **224**, level 10 needs **2,000**. Each level up also pays out **3 gold × the level reached**, and raising your level increases your maximum energy (see Energy & Work).

Your level also grows your **storage**: every shelf holds its base × (1 + 15% per level above 1 + 3% per Strength point + 2% per Economy point). The bases are **150 / 90 / 52 / 30 / 15** for food, weapons and tickets (T1–T5), **750** for each raw, **150** for each component and **30 / 18 / 10 / 6 / 3** ships.

WHERE XP COMES FROM

- **Working — 4 XP per 10 energy** of a shift.
- **Fighting — 20 XP per 10 energy**, the best rate in the game (see War & the Front).
- **Golden Hours** — from 17:00 to 18:00 UTC, work and war XP are **doubled**.
- **Daily missions — 10 XP** for each mission you claim.

- **The supply drop** — claiming it each day grants **10 XP** (plus gold and local currency).

Mission and supply-drop XP is never doubled. See Daily Systems for both.

WHAT LEVELS UNLOCK

LEVEL	WHAT IT OPENS
10	founding a political party
15	founding a company
20	trading by contract (both sides need it)
25 · 50 · 100	your first, second and third convoy slot (Premium adds one more at any level)
41	the energy ceiling: **300** maximum energy

Every level also adds **+0.5% production** to your work shifts, and every **8 levels** add one more weapon to the burn of each 10-energy strike — more weapons fired, more damage dealt (see War & the Front).

TRAINING

Training permanently raises one of three stats (their full purpose and every place they pay off is on the Stats page):

- **Strength** — combat power: every point adds +1 damage per weapon fired.
- **Education** — speeds up future training and adds production.
- **Economy** — the biggest lever on how much you produce and earn per shift.

Only **one stat trains at a time**. Each training raises the stat by one level. Training costs gold and time — never energy.

COST AND TIME

Training the stat to its next level n costs gold equal to that level:

$$\text{cost}(n) = n \quad \text{gold}$$

The wait scales with the target level and shrinks as your Education grows:

$$\text{time}(n) = \text{round}\left(0.2894 \cdot n^{2.5} \cdot \frac{1}{1+0.01\,S_{\text{edu}}}\right) \quad \text{seconds}$$

never less than a second. There is no wall: before any bonus, the 100th point takes about 8 hours and the 300th about 5 days. A year of non-stop training, Education first, reaches about 300 in every stat.

Early levels are quick and cheap; later ones are a real commitment. Because there is no cap on the Education discount, every point you invest keeps paying off.

TRAINING FASTER

On top of your own Education, these cut the time of a training you start. They add together, but a training never drops below a tenth of its time:

- the **Education index** of the region you stand in — up to **−25%** in a fully built, fully powered region, and more in one of the day's three best cities;
- **Liberalism** as the ideology of the state that holds that region — **−15%**;
- a **Field Academy** in your convoy — up to **−10%**;
- **Premium** — **−10%**.

The cut is fixed when the training starts; moving afterwards does not change it. The dashboard shows the time, the cost and which bonuses shortened it before you start.

WHEN IT FINISHES

The point lands the next time you open the game after the timer runs out, and a notification tells you the stat's new value. Starting a training counts for the **Do a training** daily mission and for live events that count trainings.
